Factor Trees

1. Make factor trees and find the prime factorization for the following numbers.

Example: 20

$$20 = 2 * 2 * 5$$

a. 66

b. 72

$$66 = \underline{\hspace{2cm}}$$

$$72 = \underline{\hspace{2cm}}$$

2. Write each fraction in simplest form. Use factor trees to help you. Show your work.

a. $\frac{20}{66} = \underline{\hspace{1cm}}$

b. $\frac{66}{72} = \underline{\hspace{1cm}}$

c. $\frac{20}{72} = \underline{\hspace{1cm}}$

3. Find the prime factorization for 250. $\underline{\hspace{3cm}}$

4. **a.** Circle the number that has the most prime factors.

63

32

49

100

- b.** Which has the fewest prime factors? $\underline{\hspace{2cm}}$

5. Simplify the fraction to the right. $\frac{150}{225} = \underline{\hspace{2cm}}$

Practice

6. $\frac{1}{4} * 36 = \underline{\hspace{2cm}}$

7. $0.25 * 360 = \underline{\hspace{2cm}}$

8. $\frac{1}{3} * 90 = \underline{\hspace{2cm}}$

9. $33\frac{1}{3}\%$ of 90 = $\underline{\hspace{2cm}}$
